#### FSD-2 Practice Book\_2025

| Sr.N unit_nun | question_text   | answer_text   | marks | previous_year | option1   | option2  | option3  | option4   |
|---------------|---|---|-------|---------------|---|--|--|---|
| 0 ber 1 1     | In the JSON syntax, data is separated by  | Commas  | 0.5   |               | Semicolons  | Colons   | Commas   | -   |
| 2 1           | which of the following is incorrect about JSON:  1.JSON stands for JavaScript Object Notation  2.JSON is a lightweight format for storing and transporting data  3.In JSON Curly braces hold Arrays  4.JSON is often used when data is sent from a server to a web page  5.JSON is "self-describing" and easy to understand | 3only   | 1     |               | 2.3   | 3,4  | 3 only   | 5 only  |
| 3 1           | How do you represent a JSON array of strings?   | { "days" : [ "SUN" , "MON" , "TUE" ,<br>"WED" , "THU" , "FRI" , "SAT" ] }                                     | 1     |               | [ "days" : { "SUN" , "MON" , "TUE" , "WED" , "THU" , "FRI" , "SAT" } ]  | [ "days" : { SUN , MON , TUE , WED , THU , FRI , SAT } ]   | , { "days" : { "SUN" , "MON" , "TUE" , "WED" , "THU" , "FRI" , "SAT" } }                                 | { "days" : [ "SUN" , "MON" , "TUE" , "WED" , "THU" , "FRI" , "SAT" ] }  |
| 4 1           | Which of the following code will throw an error?  | JSON.parse(undefined);  |       | LJU-2023      | JSON.parse(false);  | JSON.parse(null);  | JSON.parse(undefined);   | JSON.parse(0);  |
| 5 1           | Which of the following JSON values cannot be one of the following data types?   | function  | 0.5   |               | a number  | a string   | a function   | null  |
| 6 1           | JavaScript has a built in function for converting an object into a JSON string:   | JSON.stringify()  | 0.5   |               | JSON.parse()  | JSON.stringify()   | JSON_Parse ()  | JSON_Stringify()  |
| 7 1           | JavaScript has a built in function for converting JSON strings into JavaScript objects  | JSON.parse()  | 0.5   |               | JSON.parse()  | JSON.stringify()   | JSON_Parse ()  | JSON_Stringify()  |
| 8 1           | The extension and MIME type for JSON text is  | .json & application/json  | 0.5   |               | .json & application/json  | .js & application/json   | .json & text/js  | .js & text/json   |
| 9 1           | What will be the output of following code var obj= {     "employee" : { "name" : "John", "age" : 30, "city" : "New York" } } console.log(employee)  | Error   | 1     |               | { "name" : "John", "age" : 30, "city" : "New<br>York" }   | "employee" : { "name" : "John", "age" : 30, "city" : "New York" }                                      | Error  | Undefined   |
| 10 1          | What will be the output of following code var obj= { "employee" : { "name" : "John", "age" : 30, "city" : "New York" } } console.log(obj.name);   | undefined   | 1     | LJU-2023      | { "name" : "John", "age" : 30, "city" : "New<br>York" }   | undefined  | Syntax error   | John  |
| 11 1          | const person= {     name:"xyz",     age:28,     employee:     [{         emp_name:"pqr",         designation:"prof",         weekly_lec:["Tuesday"]     },     {         emp_name:"jkl",         designation:"Asst prof",         weekly_lec:["Friday","Saturday"]     }}   | console.log(person.employee[0].weekly_lec.le ngth);   | 1     | LJU-2023      | console.log(person.employee[0].weekly_lec.length);  | console.log(person.employee[0].weekly_lec.length());   | console.log(person.employee[0].weekly_lec[0].length);  | console.log(person.employee[1].weekly_lec.len gth);   |
|               | Identify the correct statement to print no. of weekly lectures of "pqr" employee  | 1.  |       |               |   |  |  |   |
| 12 1          | What is the correct way to convert a JavaScript object into a JSON string?  | const obj = { name: "John", age: 30 };<br>const jsonString = JSON.stringify(obj);<br>console.log(jsonString); | 1     |               | const obj = { name: "John", age: 30 };<br>const jsonString = JSON.stringify(obj);<br>console.log(jsonString); | const obj = { name: "John", age: 30 };<br>const jsonString = obj.toJSON();<br>console.log(jsonString); | const obj = { name: "John", age: 30 };<br>const jsonString = obj.toString();<br>console.log(jsonString); | const obj = { name: "John", age: 30 };<br>const jsonString = JSON.stringify(obj, null, 2);<br>console.log(jsonStringify); |
| 13 1          | Consider the following JSON object: const jsonObject= {   "name": "John",   "age": 25,   "city": "New York",   "hobbies": ["reading", "running", "painting"] } Which of the following options correctly accesses the second hobby "running" from the above JSON object?   | jsonObject.hobbies[1]   | 1     |               | jsonObject.hobbies[0]   | jsonObject.hobbies[1]  | jsonObject.hobbies[2]  | jsonObject.hobbies{"running"}   |
| 14 1          | How do you represent a JSON array of objects?   | {"students": {{"name":"Alvin", "age":21, "city":"Mumbai"}, {"name":"Alex", "age":24, "city":"Delhi"}}}        | 1     |               | {"students": {{"name":"Alvin", "age":21, "city":"Mumbai"}, {"name":"Alex", "age":24, "city":"Delhi"}}}        | {"students"= [{"name":"Alvin", "age":21, "city":"Mumbai"}, {"name":"Alex", "age":24, "city":"Delhi"}]} | {"students"= {{"name":"Alvin", "age":21, "city":"Mumbai"}, {"name":"Alex", "age":24, "city":"Delhi"}}}   | {"students": [{"name":"Alvin", "age":21, "city":"Mumbai"}, {"name":"Alex", "age":24, "city":"Delhi"}]}                    |

|------|-----------------|--|--|-------|---------------|--|--|---|--|
| 15   | 1               | Consider the following JSON object: const jsonObject= {     "name": "John",     "age": 25.     "city": "New York" } Which of the following options correctly accesses the value of the "age" property from the above JSON object?  | jsonObject["age"]  | 1     |               | jsonObject.set{age}  | jsonObject.getValue("age")   | jsonObject.get("age")   | jsonObject.value("age")                                      |
| 16   | 1               | Identify Output const user={     "name":"XYZ",     "course":["MATHS","COA","FSD-2"],     "division":{     "AI ":25,     "B1":30,     "C1":["A","B","C"] } } console.log(user.name) console.log(user.division.B1) console.log(user.division.C1[1])  | XYZ<br>["MATHS", "COA", "FSD-2"]<br>30<br>B                  | 1     |               |  | XYZ<br>MATHS, COA, FSD-2<br>30<br>C                                | XYZ<br>MATHS<br>30<br>B   | XYZ<br>MATHS, COA, FSD-2<br>B1<br>B                          |
| 17   | 1               | Identify the output: var myJson = {'key:'value', 'key2:'value2'}; for(var myKey in myJson) {     console.log('key:"+myKey+", value:"+myJson[myKey]); }   | key:key, value:value<br>key:key2, value:value2               | 1     |               | key:key, value:value<br>key:key2, value:value              | key:key, value:value<br>key:key2, value:value2                     | key:key, value:value2<br>key:key2, value:value                            | key:key2, value:value<br>key:key, value:value2               |
| 19   |                 | Which of these is an example of a proper JSON array?  What is the value of obj in the following code?  var obj = JSON.parse('("fruit":"apple")', function(a,b) {if(b=="apple") return  "orange"; else return b;})  console.log(obj)  | { "students": ["Sita", "Rita", "Gita"] } { fruit: 'orange' } | 0.5   |               | { students= ["Sita", "Rita", "Gita"] }  { fruit: 'apple' } | { "students": ["Sita", "Rita", "Gita"] } { fruit: 'apple,orange' } | { "Students": [{"Sita", "Rita", "Gita"]} }  { fruit: ['orange', 'apple']} | { "students": ["Sita", "Rita", "Gita"} } { fruit: 'orange' } |
| 20   | 1               | Identify the correct output from the following code: myison="("name:";xyz","marks":16,"shopIrem":["food","cloth",{"data":true}], "flag":true,"license":null, "myobj":{"name":"nested","marks":20}}'; obj=JSON,parse(myjson); console.log(obj.myobj.marks); console.log(myjson.marks); console.log(obj.shopItem[2].data); console.log(obj.shopItem[0]); | 20<br>undefined<br>true<br>food                              | 1     | LJU-2024      | 16<br>true   | 20<br>undefined<br>true<br>food                                    | 20<br>undefined<br>undefined<br>food                                      | undefined<br>undefined<br>true<br>food                       |
| 21   | 1               | Write a script of JSON array containing objects and display the same in console.   |  | 2     |               |  |  |   |  |
| 22   | 1               | Write a JSON script by entering user detail of three different person having same age group in string format method. Print the following result in object form. (1) User Details (2) Name of 2nd person and his/her age.   |  | 2     |               |  |  |   |  |
| 23   | 1               | Write a JSON script to store information related to books based on their id, topic, edition and author. (Minimum details of three books having id=1,2,3)   |  | 2     |               |  |  |   |  |
| 24   | 1               | Write a function 'FirstAndLast' that takes in an array, and returns an object with:  1) the first element of the array as the object's key, and  2) the last element of the array as that key's value.  (Example input: ['ABC', 'DEF', 'Employee', 'Manager']  output: ABC: 'Manager')   |  | 3     |               |  |  |   |  |
| 25   | 1               | Write a JSON script to define Name,DOB,Age and birthplace of one person. Then print his birthdate in console as well as in chrome after clicking birthdate button.   |  | 3     |               |  |  |   |  |
| 26   | 1               | Write a script to define two JSON objects named as "division1" and "division2" having an array to store 5 names of students along with their roll number and list of subjects they opted.  |  | 3     |               |  |  |   |  |
| 27   | 1               | Write a JS to store an array of objects having height and name, display name and height of person with highest height.   |  | 3     |               |  |  |   |  |

| Sr.N | unit_num<br>ber | question_text answer_text  | marks              | previous_year | option1                                  | option2       | option3 | option4 |
| 28   | 1               | Write a script to define two JSON objects named as "division1" and "division2" having an array to store names of students. These name should be sorted alphabetically in the object and should be be written to the file. At last, both division objects should be visible with names sorted alphabetically in file.   | 5                  |               |  |               |         |         |
| 29   | 1               | Write a JSON object which contains array of 3 objects. Each object contains 2 properties name and age. Now, sort an array values by age in descending order. Print name in terminal as per the sorted age.   | 5                  |               |  |               |         |         |
| 30   | 1               | Write one JSON string with date property (yyyy-mm-dd) and print date in India standard time.   | 5                  |               |  |               |         |         |
| 31   | 1               | Create a JSON object named Home Expenses in which you have to add monthly expenses of transport, food bill and names of different family members including mother, father, brother and sister. Print the expenses of father with his name.   | 3                  |               |  |               |         |         |
| 32   | 1               | Write a script to define two JSON objects named as "division1" and "division2" having an array to store 5 integer numbers. Write this object in a file named XYZ.txt using file system. Define third array as result which gives output as explained below: Suppose first array contains base value and second array contains power value and then third array will give output as: a*0-For example: first array[0]=2 and second array[0]=3 then it should return 8 in third array[0]. Also append this result in XYZ.txt and as well as on console. | 3                  |               |  |               |         |         |
| 33   | 1               | Below JSON object a is given. Print below sentence in console from the given object.  Hi! We are students of LJU.  Exam - FSD2  const a = {     "A":"LJU",     "B":["CSE", { "M':[ { "N": "FSD2" }, "Exam" }}],     "C":[ {         "D": "Hi",         "E": [are, 4, {F: [semester', 'We']}]     }],     "G": { "H": "students", "I": ["of", "!"] },     "J":[{ "K":".", "L":"."},"FSD-2"] }   | 3                  |               |  |               |         |         |
| 34   | 1               | Print following statement in console from given JSON objects.  const a = {"Name" : "Ramesh",   | 3                  | LJU-2024      |  |               |         |         |

| Sr.No unit_nu | question_text  | answer_text  | marks | previous_year | option1   | option2   | option3   | option4   |
|---------------|--|--|-------|---------------|---|---|---|---|
| 35 2          | Which of the following is an advantage of using Node.js?   | It has a non-blocking I/O model  | 1     |               | It is a statically typed language   | It is a compiled language   | It has a large standard library   | It has a non-blocking I/O model   |
| 36 2          | which function is used to include modules in Node Js.  | require()  | 0.5   |               | include();  | require();  | attach();   | None of the above   |
| 37 2          | Which of the following shortcut command is used to kill a process in Node.js?  | Ctrl + C   | 0.5   |               | Ctrl + B  | Ctrl + K  | Ctrl + T  | Ctrl + C  |
| 38 2          | Which of the following is true about fs module of Node?  | Both of the above  | 0.5   |               | Every method in fs module have synchronous as well as asynchronous form   | Asynchronous methods of fs module take last parameter as completion function callback and first parameter of the callback function as error.  | Both of the above   | None of the above   |
| 39 2          | Which of the following statements are true?  | js is both Server Side and Client Side Language.   | 0.5   |               | js is Server Side Language.   | js is the Client Side Language.   | js is both Server Side and Client Side Language.  | None of the above.  |
| 40 2          | What will be output of following code? var t=5; do{ t++; console.log(t); }while(t<=10);  | 6<br>7<br>8<br>9<br>10<br>11   | 1     |               | 6<br>7<br>8<br>9<br>10<br>11  | 5<br>6<br>7<br>8<br>9<br>10   | 6<br>7<br>8<br>9<br>10  | 5<br>6<br>7<br>8<br>9<br>10   |
| 41 2          | is an interactive shell that processes Node.   | REPL   | 0.5   |               | REAL  | REPL  | RESP  | RPEL  |
| 42 2          | Underscore (_) variable in REPL session of NodeJS is used for?   | It is used to get last result  | 1     |               | It is used to store result  | It is used to get the last command that was used  | It is used to get last result   | It is used to print result  |
| 43 2          | Which statement is true for following code?<br>function myFunc(arg)<br>{ console.log(`arg was => \${arg}`);<br>setTimeout(myFunc, 1000,'funky');   | arg was =>funky , will show after 1 second of program run  | 1     | LJU-2023      | arg was =>funky , will show after 1 second of program run   | arg was =>funky , will show till 1000 miliseconds after the program run   | arg was =>funky , will show immediately the program run   | undefined   |
| 44 2          | Which statement is true for following code?<br>setInterval(() => {console.log('HELLO GEEK');}, 1000);  | HELLO GEEK , will print infinite time after 1 second   | 1     |               | HELLO GEEK, will print 1000 times   | HELLO GEEK, will print one time after 1000 miliseconds  | HELLO GEEK, will print 1000 time after 1 second   | HELLO GEEK , will print infinite time after 1 second  |
| 45 2          | Identify the correct code which produces following output. D:/ABC/DEMO .txt abc.txt  | var pm=require("path"); path1=pm.dirname("D:/ABC/DEMO/abc.txt"); console.log(path1); path2=pm.extname("D:/ABC/DEMO/abc.txt"); console.log(path2); path3=pm.bsename("D:/ABC/DEMO/abc.txt"); console.log(path3); | 1     |               | var pm=require("path"); path1=pm.dir("D:/ABC/DEMO/abc.txt"); console.log(path1); path2=pm.extension("D:/ABC/DEMO/abc.txt"); console.log(path2); path3=pm.base("D:/ABC/DEMO/abc.txt"); console.log(path3); | var pm=require("path"); path1=pm.dirname("D:/ABC/DEMO/abc.txt"); console.log(path1); path2=pm.extname("D:/ABC/DEMO/abc.txt"); console.log(path2); path3=pm.basename("D:/ABC/DEMO/abc.txt"); console.log(path3); | var pm=require("path"); path1=pm.dir("D:/ABC/DEMO/abc.txt"); console.log(path1); path2=pm.ext("D:/ABC/DEMO/abc.txt"); console.log(path2); path3=pm.base("D:/ABC/DEMO/abc.txt"); console.log(path3); | var pm=require("path"); path1=pm.directory("D:/ABC/DEMO/abc.txt"); console.log(path1); path2=pm.extension("D:/ABC/DEMO/abc.txt"); console.log(path2); path3=pm.file("D:/ABC/DEMO/abc.txt"); console.log(path3); |
| 46 2          | Which of the following is used to create a new HTTP server in Node.js?   | http.createServer()  | 1     |               | http.createServer()   | http.createServer   | http.newServer()  | http.newServer  |
| 47 2          | In REPL mode, Identify the correct code which produces following output.   | > var a=7<br>> var b=6<br>> a+b  | 0.5   | LJU-2023      | > var a=7<br>> var b=6<br>> a+b   | > var a=7<br>> var b=6<br>> print a+b   | > var a=7, b=6<br>> print a+b   | > var a=7 b=6<br>> a+b  |
| 48 2          | Identify the equivalent code of given code snippet which produces same Output.  var pm=require("path");  var path="D-/abc/det/jkl/some.txt";  var ans=pm.basename(path);  var sep=ans.split(".");  console.log("Filename="+sep[0]);  console.log("Extension="+"."+sep[1]); | var pm=require("path"); var path="D/abc/def/jkl/some.txt"; var ans=pm.parse(path); console.log("Filename="+ans.name); console.log("Extension="+ans.ext);   | 1     | LJU-2023      | var pm=require("path"); var path="D'.abc/defjkl/some.txt"; var ans=pm.parse(path); console.log("Filename=" +ans.filename); console.log("Extension=" +ans.ext);  | var pm=require("path"); var path="D/abc/def/jkl/some.txt"; var ans=pm.parse(path); console.log("Filename=" +ans.filename); console.log("Extension=" +ans.extension);  | var pm=require("path"); var path="D:/abc/def/jkl/some.txt"; var ans=pm.parse(path); console.log("Filename="+ans.filename); console.log("Extension="+pm.extname(path));                              | var pm=require("path"); var path="D'zhbc/def/jkl/some.txt"; var ans=pm.parse(path); console.log("Filename="+ans.name); console.log("Extension="+ans.ext);   |

#### FSD-2 Practice Book\_2025

| Sr.No unit_nu mber | question_text   | answer_text   | marks previous_year | option1  | option2  | option3  | option4   |
|--------------------|---|---|---------------------|--|--|--|---|
| 49 2               | Which of the following code deletes only contents of a "example.txt" file and keeps file as it is, if something is already written in it. Deletion should result without any error.                                   | var fs=require("fs");<br>fs.writeFile("example.txt","", (err)=><br>{console.log(err);<br>});  | 1 LJU-2023          | var fs=require("fs");<br>fs.writeFile("","example.txt",(err)=><br>{console.log(err);<br>});  | var fs=require("fs"); fs.writeFile("example.txt","", (err)=> {console.log(err); });  | var fs=require("fs"):<br>fs.writeFile("","example.txt",(data, err)=><br>{ console.log(err);<br>console.log(data);<br>});                   | var fs=require("fs"); fs.writeFile("","example.txt",(data)=> {             console.log(data); });   |
| 50 2               | Which is the correct code for following output: UGC_31 x64 win32 C:\Users\UGC\AppData\Local\Temp  | var os=require("os");<br>console.log(os.hostname());<br>console.log(os.arch());<br>console.log(os.platform());<br>console.log(os.tmpdir()); | 1 LJU-2023          | var os=require("os");<br>console.log(os.host());<br>console.log(os.arch());<br>console.log(os.platform());<br>console.log(os.dirname()); | var os=require("os");<br>console.log(os.host());<br>console.log(os.arch());<br>console.log(os.platform());<br>console.log(os.tempdir()); | var os=require("os");<br>console.log(os.hostname());<br>console.log(os.arch());<br>console.log(os.system());<br>console.log(os.tempdir()); | var os=require("os");<br>console.log(os.hostname());<br>console.log(os.arch());<br>console.log(os.platform());<br>console.log(os.tmpdir()); |
| 51 2               | Idntify output of following statement.<br>console.log(pm.basename("D:/hello/abc/1.doc"));<br>Where pm is an object of path module.  | 1.doc   | 0.5                 | D:/hello/abc   | D:/hello/abc/1.doc   | 1.doc  | doc   |
| 52 2               | Identify error/output. const fs=require("fs"); data=fs.readFile("abc.txt") console.log(data);   | Syntax error  | 0.5                 | contents of abc.txt file is printed  | UTF-8 values of contents of abc.txt is printed   | ASCII values of contents of abc.txt is printed   | Syntax error  |
| 53 2               | const h=require("http"); const obj= {     name: "Demo",     age:33 } h.createServer(     (req.res)=> {     res.end(); }).listen(3000); Fill in the blank in res.end() method, so that it would not generate an error. | Only (A),(B),(C)  | 1                   | JSON.stringify(obj)  | obj.toString()   | ***+obj  | Only (A),(B),(C)  |
| 54 2               | Identify error/output. function fun(x) {     console.log(x++) } setTimeout(function() {     fun(1); },3000)   | Prints 1 after 3 seconds of delay   | 1                   | Prints 2 after 3 seconds of delay  | Prints 1 after 3 seconds of delay  | Prints 1,2,3 Infinite every 3 seconds of duration  | Error, as 3000 must be as 1st argument in set(Timeout() function  |
|                    | What will be the output of the following code? var pm=require("path"); ext = pm.extname("D/LJ/abc.text") if(ext == ".txt"){     console.log("Text Document"); }else {     console.log("Not a text Document"); }       | Not a text Document   | 1                   | Text Document  | Not a text Document  | Error:No such method named extname() exists  | Error: No such method named require exists  |
| 56 2               | What will be the output of the following code in console? var ps=require("fs"); ps.writeFileSync("Hello.txt","Hello! How are you!") ps.readFileSync("Hello.txt")  | <buffer 20="" 21="" 48="" 61<br="" 65="" 6c="" 6f="" 77="">72 65 20 79 6f 75 20 21&gt;</buffer>   | 1                   | Hello! How are you   | Error"Hello.txt" doesn't exist   | null   | <buffer 20="" 21="" 48="" 61="" 65="" 6c="" 6f="" 72<br="" 77="">65 20 79 6f 75 20 21&gt;</buffer>  |

#### FSD-2 Practice Book\_2025

| Sr.No unit_number | question_text   | answer_text   | marks | previous_year | option1  | option2   | option3   | option4   |
|-------------------|---|---|-------|---------------|--|---|---|---|
| 57 2              | Which of the following functions is used to execute a function named fun on every 2 seconds time interval?  | setInterval(fun,2000)   | 1     |               | setInterval(fun,2000)  | setInterval(fun,2)  | setInterval(2000,fun);                                      | setTimeout(fun,2000);   |
| 58 2              | Which of the following options correctly demonstrates the usage of the Path module in Node.js to render only the filename including its extension?  | path.basename("E:/abc/file.txt ")   | 0.5   |               | path.fullname("E:/abc/file.txt")                                 | path.filename("E:/abc/file.txt ")   | path.filename("E:/abc/file.txt ")                           | path.basename("E:/abc/file.txt ")                                     |
| 59 2              | Which of the following options demonstrates the correct usage of the fs.writeFileSync method in Node.js to write data to a file synchronously?  | fs.writeFileSync("data.txt", "Hello, World!");                            | 0.5   |               | fs.writeFileSync("data.txt", "Hello, World!");                   | fs.writeFileSync("data.txt", { message: "Hello, World!" });               | fs.writeFileSync({ path: "data.txt" }, "Hello,<br>World!"); | fs.writeFileSync({ path: "data.txt" }, { message: "Hello, World!" }); |
| 60 2              | What does REPL stand for?   | read, eval, print, loop   | 0.5   |               | run, examine, put, loop  | read, eval, print, loop   | run, edit, print, loop                                      | read, execute, print, loop  |
| 61 2              | Which method is used to delete a file using the 'fs' module?  | fs.unlink()   | 0.5   |               | fs.removeFile()  | fs.unlink()   | fs.delete()   | fs.removeFile()   |
| 62 2              | How can you get the free memory of system using the 'os' module?  | os.freemem()  | 0.5   |               | os.home()  | os.totalMemory()  | os.freemem()  | os.totalmem()   |
| 63 2              | Which of the following options demonstrates the correct usage of the fs.readFile method in Node.js to read a file asynchronously?   | fs.readFile('file.txt', 'utf-8', (err, data) => {   console.log(data) }); | 1     |               | $fs.readFile('file.txt', (data) => \{\ console.log(file);\ \});$ | fs.readFile('file.txt', 'utf-8', (err, data) => {   console.log(data) }); | fs.readFile('file.txt', 'utf-8'); console.log(read);        | fs.readFile('file.txt', 'this',{ console.log(file.txt[data]) });      |
| 64 2              | What does the code shown below do? const fs = require('fs'); const os = require('os'); const os = require('os'); const system = os.platform(); fs.appendfile('hello.txt', 'Hello \${system}', (err) => { if (err) throw err; console.log('The data was appended to file!'); }); | creates a text file hello.txt and appends Hello win32                     | 1     |               | creates a text file hello.txt and appends Hello win32            | creates an image file   | file not create and shows the error                         | creates a file named data and append numbers                          |
| 65 2              | What will be the output of command in node as: > 5 === '5'  | false   | 0.5   |               | 0  | 1   | TRUE  | FALSE   |
| 66 2              | Identify the output of last statement: >node > x + y 30 > var sum = _   | undefined   | 1     |               | 30   | undefined   | 0   | Error   |
| 67 2              | Which of the following give available physical memory in MB?  | console.log(`\${os.freemem()/1024/1024}`);                                | 1     |               | console.log(`\${os.freemem()/1024/1024/1024}`);                  | console.log(`\${os.freemem()/1024/1042}`);                                | console.log(`\${os.freemem()/1024/1024}`);                  | console.log(`\${os.freemem()/1024/1204/1204}`);                       |
| 68 2              | Which command is used to install nodemon?   | npm install -g nodemon  | 1     |               | node -g install nodemon  | node install -g nodemon   | npm node install -g nodemon                                 | npm install -g nodemon  |

|---|---|-------------|-------|---------------|---------|---------|---------|---------|--|--|
| Sr.No unit_m  |   | answer_text | marks | previous_year | option1 | option2 | option3 | option4 |  |  |
| 78 2  | Write node.js script to print "Welcome Admin" on home page of server. If user request for second page it display "This is second page" in italic font-style and if any other request is requested it shows "Page not found" message.  |             | 4     |               |         |         |         |         |  |  |
| 79 2  | Write a script to display sum of two numbers which are passed as an argument in function named Total. the sum should display in any html element. Use callback as third argument in Total function.   |             | 3     |               |         |         |         |         |  |  |
| 80 2  | Write a script to define two JSON objects named as "division1" and "division2" having an array to store names of students. These names should be sorted alphabetically in the object and should be written to the file. At last, both division objects should be visible with names sorted alphabetically in file.  |             | 2     |               |         |         |         |         |  |  |
| 81 2  | Write a node is script to write contents to the file in original manner. Delete file after finishing writing.   |             | 3     |               |         |         |         |         |  |  |
| 82 2  | Write a program to demonstrate various methods of path module in Node.js.   |             | 2     |               |         |         |         |         |  |  |
| 83 2  | Write a node is script to jump on a specific code by specifying path on address bar of browser.   |             | 2     |               |         |         |         |         |  |  |
| 84 2  | Write a program to demonstrate various methods of os module in Node.js.   |             | 2     |               |         |         |         |         |  |  |
| 85 2  | Write a node is script to print 3 different JSON objects by specifying corresponding object name on address bar.  |             | 4     | LJU-2023      |         |         |         |         |  |  |
| 86 2  | Write a node js script to write the text "You are creating a file" to help.txt file. After that append the text "you are appending data" to same help.txt file. After that read the file and print file contents on console. After finishing read operation, print the line "Thanks for using my program" on console. write append, read sequence must be maintain. all read ,write and append operations are asynchronous. |             | 4     | LJU-2023      |         |         |         |         |  |  |
| 87 2  | Write a node js script to print 1st 10 prime numbers on browser in table of 10 rows. Odd no. of rows should render in blue color and even no. of rows should render in red color.   |             | 5     |               |         |         |         |         |  |  |
| 88 2  | Write a nodeJS script to print "My PC is on fire" on server at port no 5555 if having more than 4gb physical available memory otherwise, "I need more memory" should get displayed.   |             | 4     |               |         |         |         |         |  |  |
| 89 2  | Write a node, js script to write the text "This is data" to new.txt file. After that append the text "That is data" to same new.txt file. After that read the file & print the file content on console. After finishing read operation print the line "Thank you for using program". Write, append & read sequence must be maintained & all operations are asynchronous.  |             | 5     |               |         |         |         |         |  |  |

#### L.J. Institute of Engineering & Technology, Ahmedabad FSD-2 Practice Book\_2025 Note: The Practice Book is for reference only, LJU Test paper may not be compulsory set from this option3 question text previous\_year option4 answer text option1 option2 Write a Node.Js program for following action 1. Write a file having five random elements separated by white space in .txt 90 2 2.append sorted array of these 5 elements in same file along with message : 5 "Sorted array:" in new line. 3.Find maximum number from that and append with message "maximum number=" in same file. Create HTTP webpages where Admin page display "Sufficient Memory:" in bold blue color with font size of 24px along with available memory in GB with font size 32px and red color if available physical memory of the system is greater than 1 GB. Else it shows "Not Sufficient Memory" in simple text. For any other page requested then shows "You are not admin" message. Write a function 'ArrayToObject' which takes in an array of arrays, and returns an object with each pair of elements in the array as a key-value pair and store the result in one arraytoobject.txt file. 92 5 Input=[['Country', India'], ['State', 'Gujarat'], ['City', 'Ahmedabad']] Output= { Country : 'India', State : 'Gujarat', City : 'Ahmedabad' } Write a Node.js program to CRUD operation of file management. 1)Create folder named "Hello". Create file in it named abc.txt and enter data in to it. 93 3) Add more data at last in file. 5 4) Read data without getting buffer data at first. 5) rename file Delete both file and folder. Write node.js script to print "Welcome to Home Page" with two links containing two pages named as "About Us" and "Contact Us" on home page of server. If user request for About Us page it should display "Welcome to 94 LJ University" in bold font-style with blue color and if user request for Contact Us page it should display "Email:abc@ljinstitutes.edu.in" in italic font-style with red color if any other request is requested it shows "Page not

found" message in plaintext.

| 150   | 3          | Write a nodeJS script to fire an event named calculate which calculates the total marks of 5 subjects about of 25 marks and displays the total marks on console as an output. The calculate event fires another event name percentage which takes total marks as argument and percentage should get displayed in console.  |             | 5       |              |         |         |         |         |
| 151   | 3          | Write node, js script to create a file named "new.txt". Now, check if available memory of the system is greater than 1 GB then print message "Sufficient Memory" in the file, else print message "Low Memory" in file.   |             | 5       |              |         |         |         |         |
| 152   | 3          | Write a function that takes an array of numbers as input and returns the sum of all the numbers in the array after 3 seconds.  |             | 2       |              |         |         |         |         |
| 153   | 3          | Write a node, is script using Event handling to perform following tasks in sequence: a) Create file in it named abc.txt and enter data into it. b) Append data to that file abc.txt and print message "Data Appended Successfully". c) Read the content of the file abc.txt and print the content on http web server. d) Do all the operations of File using asynchronous file system module. And Lastly print the message "All operations performed successfully" on console. |             | 4       |              |         |         |         |         |
|       |            | Write node is script to fetch values from url given below and display output as asked.  "https://www.google.com/exam.txt?e1=Hello&c2=FSD2+T1+Test&c3=Welcome+to+LTU#AllThe Best"  1) Data must be written as below in file named "exam.txt". File name must be fetched from the url given above.   |             |         |              |         |         |         |         |
| 154   | 3          | Output:<br>Hello!<br>Welcome to LJU FSD2 T1 Test<br>#AllTheBest  |             | 5       |              |         |         |         |         |
|       |            | 2) Read content from file "exam.txt" and send response to server and display data in "/" page in same format as above but in H1 tag and in red color.  3) If any other page is requested it shows "Page not found" message in plain text.  |             |         |              |         |         |         |         |
| 155   | 3          | Write a node, js script to perform the tasks using own module.  1.It has functions like c_area(),c_perimeter(),s_area() and s_perimeter() to calculate the area of circle, perimeter of sicule, and or a square and perimeter of square respectively.  2. Write all necessary , js files and display all calculated values in console.  (area of circle = pi**r*r and perimeter=2*pi*r*)(area of square = side * side and perimeter = 4*side)                                  |             | 4       | LJU-2024     |         |         |         |         |
| 156   | 3          | Create HTTP webpage on which Home page display "Welcome to Log in page" in blue color and font size must be 32px, Login page shows one HTML file from static URL having Form with detail for Username, Password, submit and reset button. Gallery page reflect one Image "hello.jpg" and any other page shows "Page Not found".  Write all necessary files to perform task. (Image already exist in same folder)   |             | 5       |              |         |         |         |         |

#### FSD-2 Practice Book\_2025

| Sr.No u | it_number | question_text  | answer_text   | marks | previous_year | option1  | option2  | option3   | option4  |
|---------|-----------|--|---|-------|---------------|--|--|---|--|
| 157     | 4         | Which of the following are the core features of the Express framework?   | All of the above.   | 1     |               | It allows us to set up middleware to respond to HTTP Requests.                         | It defines a routing table that can work as per HTTP Method and URL.                 | It is used to render the HTML pages dynamically.  | All of the above.  |
| 158     | 4         | Where are the captured values populated regarding the route parameters?  | req.params  | 1     | LJU-2024      | req.data   | app.locals   | req.params  | All of the above   |
| 159     | 4         | Which of the following function arguments are available to Express.js Route handlers?  | All of the above  | 1     |               | req - the request object   | res - the response object  | next  | All of the above   |
| 160     | 4         | Which of the following is a middleware in Express.js?  | function(req,res,next){ }   | 1     |               | function(req){ }   | method(req){ }   | function(req.res,next){ }   | method(req.res,next){ }  |
| 161     | 4         | Which of the following is the correct syntax to use Express.js in Node?  | var app = require('express');   | 1     |               | var = require('express');  | var_require('express');  | var app = require('express');   | None of the above.   |
| 162     | 4         | Which of the following is a middleware that parses cookies attached to the client request object?  | cookie-parser   | 1     |               | cookie   | cookies  | cookie-parser   | None of the above  |
| 163     | 4         | Which of the following function is used to specify what to do when a get request at the given route is called?   | app.get(route, callback)  | 1     |               | app.get(route, callback)   | get(route, callback)   | js.get(route, callback)   | fun.get(route, callback)   |
| 164     | 4         | Which of the following HTTP method, are used to transmit a limited amount of data, as the data is included in the header?  | GET   | 1     |               | GET  | POST   | PUT   | DELETE   |
| 165     | 4         | requests are used to transmit a large amount of data, as the data is included in the body of the request?  | POST  | 1     |               | GET  | POST   | PUT   | DELETE   |
| 166     | 4         | are little pieces of information transmitted from a website and kept in the user's web browser when the user visits that page.   | Cookies   | 1     | LJU-2024      | Session  | Cookies  | Forms   | parameters   |
| 167     | 4         | functions are those that interact with the request and response objects (req, res) during the request-response cycle?  | Middleware  | 1     |               | Data binding   | Routing  | Middleware  | Forms  |
| 168     | 4         | What is the purpose of the Express.js app.listen() function?   | To start the application server   | 1     |               | To start the application server  | To stop the application server   | To restart the application server   | To connect to a database   |
| 169     | 4         | What is the purpose of the req object in Express.js?   | var fs=require("fs");<br>fs.writeFile("example.txt","", (err)=><br>{console.log(err);<br>});  | 1     |               | To represent the HTTP request  | To represent the HTTP response   | To store session data   | To store user authentication data  |
| 170     | 4         | What is the purpose of the res object in Express.js?   | var os=require("os");<br>console.log(os.hostname());<br>console.log(os.arch());<br>console.log(os.platform());<br>console.log(os.tmpdir()); | 1     |               | To represent the HTTP request  | To represent the HTTP response   | To store session data   | To store user authentication data  |
| 171     | 4         | method is used to set content type in express IS. Consider res, app and expr as objects of response, express alias and express respectively.   | res.set()   | 1     |               | app.set()  | expr.set()   | res.set()   | app.use()  |
| 172     | 4         | Identify the correct code snippet to store passed "name" parameter to cookie, which expires after closing browser and terminate by printing "Done".  | const username=req.query.name;<br>res.cookie("uname",username);<br>res.send("Done");  | 1     |               | const uername=req.query["name"];<br>res.cookie("uname",username);<br>res.send("Done"); | const username=req.query.name;<br>res.cookie("uname",username);<br>res.send("Done"); | const username=req.query["name"];<br>res.cookie("uname",username.{expires:ne<br>w Date(Date.now()+1000)});<br>res.send("Done"); | const username=req.query.name;<br>res.cookie("uname",username,<br>{expires:new Date(Date.now()+1000)});<br>res.send("Done"); |
| 173     | 4         | Consider following HTML file with 4 choices using checkboxes. Identify the correct option to retrieve values of all selected checkboxes after clicking submit button.  form action="http://localhost:6001/process_post" method="post">  input type="checkbox" name="sports" value="Hockey">Hockey  input type="checkbox" name="sports" value="Cricket">Cricket  input type="checkbox" name="sports" value="Foootball"/>Football  input type="checkbox" name="sports" value="Foootball"/>Football  value="Volleyball"/>Volleyball | sports=req.body.sports;<br>res.write(`Sports=\${sports}`);  | 1     | LJU-2024      | <pre>sports=req.body.sports; res.write(`Sports=\${sports[0]}`);</pre>                  | sports=req.body.sports;<br>res.write(`Sports=\${sports}`);                           | sports=req.query.sports;<br>res.write(`Sports=\${sports}`);   | sports=req.query.sports[0];<br>res.write(`Sports=\${sports}`);   |
| 174     | 4         | Identify the valid signature of app.get() method. req.res and next are the objects of request, response and middleware respectively.   | app.get("/",function(req,res,next){});  | 1     |               | app.get("/",function(req){});  | app.get("/",function(res){});  | app.get("/",function(req,res){});   | app.get("/",function(req,res,next){});   |

#### FSD-2 Practice Book\_2025

| Sr.No | unit_numbe | r question_text   | answer_text  | marks | previous_year | option1  | option2   | option3  | option4   |
|-------|------------|---|--|-------|---------------|--|---|--|---|
| 175   | 4          | Consider following code and identify error/output. const expr=require("express"); const sess=require("express-session"); const app=expr(); app.use(sess({     reave: false,     saveUninitialized: false,     secret: 'eyboard cat' })); app.get("",(req.res)=> {     if(req.session.page_views)     {         req.session.page_views++;         res.send("You visited this page "+req.session.page_views+" times");     } })); | Code will perfectly work as a hit counter by initializing page_views=1 automatically           | 1     |               | Code will perfectly work as a hit counter by initializing page_views=1 automatically           | Code will throw error while running   | While running, page will try to load infinitely as page_views variable is not initialized          | Will throw error, as JSON of session is not declared correctly                        |
| 176   | 4          | Which of the following is the correct syntax for setting a cookie in Express.js?  | res.cookie('cookieName', 'cookieValue')  | 1     | LJU-2024      | app.cookie('cookieName', 'cookieValue')  | req.cookie('cookieName', 'cookieValue')   | res.cookie('cookieName', 'cookieValue')  | req.cookies('cookieName', 'cookieValue')  const session = require('express-session'); |
| 177   | 4          | Which of the following is the correct syntax for setting up a session in Express.js using the express-session middleware?   | <pre>const session = require('express-session'); app.use(session({secret: 'mySecret'}));</pre> | 1     |               | <pre>const session = require('express-session'); app.use(session({secret: 'mySecret'}));</pre> | <pre>const session = require('express-session'); app.session({secret: 'mySecret'});</pre> | <pre>const session = require('express-session'); app.session(session({secret: 'mySecret'}));</pre> | app.use(session({session: {secret: 'mySecret'}}));                                    |
| 178   | 4          | What is the purpose of the Express.js res.redirect() method?  | To redirect the client to a different URL  | 0.5   |               | To send data back to the client  | To render a view template in the application  | To redirect the client to a different URL  | To handle errors that occur in the application  |
| 179   | 4          | What is to be used to display captured values route parameters?   | req.params   | 0.5   |               | req.data   | app.locals  | req.params   | res.data  |
| 180   | 4          | Which of the following is the correct syntax to use Express.js in Node?   | var app = require('express')();  | 0.5   | LJU-2023      | var_require('express')();  | var = require('express')();   | var app = require('express')();  | var = import('express')();  |
| 181   | 4          | Identify the method to destroy the cookie from browser.   | response.clearCookie("CookieName")   | 0.5   |               | response.destroy("CookieName")   | response.delete("CookieName")   | response.destroyCookie("CookieName")   | response.clearCookie("CookieName")  |
| 182   | 4          | Identify correct way to retrieve value of uname property using post method. "url" is an object of URL encoding.   | Both (A) & (B)   | 0.5   |               | app.post("/transfer",url,(req,res)=>{     res.send(req.body.uname)})                           | app.post("/transfer",url,(req,res)=>{     res.send(req.body["uname"])})                   | app.post("/transfer",url,(req,res)=>{     res.send(req.query.uname)})                              | Both (A) & (B)  |
| 183   | 4          | What is the purpose of response.render() method in express.js?  | to send response back to client with a<br>rendered template                                    | 0.5   |               | to send response back to client with a<br>rendered template                                    | to update database record based on data<br>submitted in form                              | to redirect client to different URL  | to parse incoming request bodies and<br>extract form data                             |
| 184   | 4          | Identify output/error from following code. uname is a name of textfield having content "xyz".  response.set("content-type","application/json") response.send(" <h1>\${request.body.uname}</h1> )  | <hl>xyz<hl></hl></hl>  | 1     |               | xyz with <h1> effect</h1>  | Error as content inside send() is not a<br>JSON object                                    | <hl>xyz<hl></hl></hl>  | Error as application/json is not a valid<br>MIME type                                 |
| 185   | 4          | Consider following code in an HTML file. Identify correct code to jump perfectly to JS file after selecting Click me link and print content of <h1>. <a href="jump">Click me</a></h1>   | Both (A) & (B) are valid   | 1     |               | app.get("/jump",(req,res)=> { res.send(` <h1>Jumped on jump page</h1> `)})                     | app.post("/jump", url, (req,res)=><br>{ res.send(` <h1>Jumped on jump<br/>page</h1> `)})  | Both (A) & (B) are valid   | app.send("/jump",(req,res)=><br>{ res.send(` <h1>Jumped on jump<br/>page</h1> `)})    |
| 186   | 4          | What will be the output on /html page if following code is there.  app.get(//html*, (req, res) => {  const html = `   | Will give html output  | 1     |               | Error: html can not be defined as variable   | Error : html can not be passed directly to res.send()                                     | Will give html output  | Error : html tags should be written in one line                                       |
| 187   | 4          | What is the purpose of req.params object in Express.js?   | To store HTTP request parameters   | 0.5   |               | To store HTTP request cookies  | To store HTTP request headers   | To store HTTP request body   | To store HTTP request parameters  |
| 188   | 4          | Which method should be used to destroy a session and remove session data in express-session?  | req.session.destroy()  | 0.5   | LJU-2024      | req.session.destroy()  | req.session.remove()  | req.session.clear()  | req.session.delete()  |
| 189   | 4          | How can you set a cookie with an expiration based on maxAge using express.js?   | res.cookie(name, value, {maxAge:<br>milliseconds})   | 1     |               | res.setCookie(name, value, {maxAge:<br>milliseconds})  | res.cookie(name, value, {maxAge:<br>milliseconds})  | res.sendCookie(name, value, {maxAge:<br>milliseconds})   | res.cookie(name, value, {expires: date})  |
| 190   | 4          | How do you retrieve the value of a cookie in Express.js?  | Using the req.cookies object   | 1     |               | Using the req.value() method   | Using the req.cookie() method   | Using the req.cookies object   | Using the req.body object   |
| 191   | 4          | What is the output of the following code?  app.get("/",(req.res)=> {     res.set("content-type", "text/html")     res.send("welcome everyone"); });   | red-colored saying "welcome everyone";   | 1     |               | red-colored saying "welcome everyone";   | red-colored big font saying "welcome<br>everyone";  | saying "welcome everyone"  | plain text saying "welcome everyone"  |
| 192   | 4          | Identify the correct syntax for setting a cookie with expiry time in Express JS?  | res.cookie('Name', 'Value', { expires: new Date(Date.now() + 86400000) });                     | 1     |               | res.cookie('Name', 'Value', { expires: new Date(Date.now() + 86400000) });                     | res.cookie('Value', 'Value', { maxAge: 86400000 });                                       | res.cookie('Name', 'Value', { expires: 86400000 sec });  | res.cookie('Name', 'Value', {<br>maxAge:(Date.new() + 86400000) });                   |

|-------|-------------|---|-------------|-------|-----------------------|---------|---------|---------|
| 214   | 4           | You have been assigned to develop a user feedback form for a website using Express, is and cookies. Implement the following requirements: Process a form with the following fields: Name, Email, Message, Rating (radio buttons: Bad, Average, Good, Very Good, Excellent) When the user submits the form, store their feedback information (name, email, message, and rating) in a cookie named "feedback" that expires in 10 seconds. Display a confirmation message to the user after successfully submitting the form & Create a link to display the feedback details stored in the "feedback" cookie. When the user click to the link, retrieve the feedback information from the cookie and display it on the page also include a link on the feedback details page to Logout. When the user clicks the link, user redirected to home page. Make app.js file use get method in express js. No need to write html file having form elements. |             | 4     |                       |         |         |         |
| 215   | 4           | write express script to maintain session and print how many times user visit the page. For ex., if user visit first time, "you have visited page First time" message will print. if user visit second time, "you have visited page second time" message will print. and so on   |             | 3     |                       |         |         |         |
| 216   | 4           | Write an express, js script to define one JSON array of 3 objects having members name and age. If user requests "maxName" URL, then only the details of oldest person should be displayed.  |             | 5     |                       |         |         |         |
| 217   | 4           | Write an express is script to define 2 pages. 1st page has username and password. Store this username to cookie on 2nd page. Cookie must stay live for 1 day.   |             | 2     |                       |         |         |         |
| 218   | 4           | Write an expressJS code which loads login.html file upon browsing localhost:3010. The Login.html file contains input for username,password and two checkboxes named remember and subscribe,on submitting the file it should go to /data page where username,password and selected checkboxes are pinted,in addition to that a logout button should be there,onclicking this button it should go back to home page "localhost:3010/".(GET/POST any method can be used)[Write all necessary files code]   |             | 5     |                       |         |         |         |
| 219   | 4           | Write an express.js script to define one JSON array of 3 objects having members  'name' and 'height'. height must be sorted descending order according to name.   |             | 3     |                       |         |         |         |
| 220   | 4           | Write an express.js script to define one JSON array of 3 objects having members 'name' and 'score'. score must be sorted descending order according to name.  |             | 3     |                       |         |         |         |
| 221   | 4           | Write an express js script to link html, ess and js file to show message "LJ University with a difference" with font size 50px and color "blue".  |             | 2     |                       |         |         |         |
| 222   | 4           | Write express js script to perform tasks as asked below.  1. Create one HTML file which contains two number type input fields, one dropdown which contains options to select like (addition, subtraction, multiplication, division) and one submit button.  2. The input fields must contain the value greater than 0 else it will give a message "Please enter the valid number". Also, user must select any type of formula from the dropdown else give a message "You have not selected any formula" (Message will be displayed on "c/cale" page.)  3. If one formula is selected and numbers are entered then Both numbers should be stored in cookies which expires in 50 seconds. Respective calculations will be performed on the page "/cale".  |             | 5     |                       |         |         |         |

| 223   | 4           | Write an ExpressJS to take a UserName, Password, Textarea for "message" & submit button using get method.  1) After clicking submit button the content of submitted details should be represented on "login" page along with one "show vowel" link.  2) By clicking "show vowel" link count of vowel used in submitted "message" will display on "/message" page. (Use next() to route page)  |             | 5     |  |         |         |         |
| 224   | 4           | Write an express.js script to print "The Pacific Ocean is the largest and deepest of the world ocean" also run on appropriate localhost.  |             | 2     |  |         |         |         |
| 225   | 4           | Write expressIS script to perform task as asked:  (A) Create one HTML file which contains text-field named username, one dropdown which contains options of country like India, USA, Canada, Australia. & one submit button.  (B) Once user clicked on submit button it will jump to next page than username & You are from "country name" which ever selected from drop box should be printed.  (C) Use get method to request data.            |             | 4     | LJU-2023                                   |         |         |         |
| 226   | 4           | what is middleware in express js? And how is it used in handling HTTP request?  |             | 2     |  |         |         |         |
| 227   | 4           | how to link html,css and js file in express js give any short example for it  |             | 2     |  |         |         |         |
| 228   | 4           | write a use of bodyparse.urlencodedmethod in express js.  |             | 2     |  |         |         |         |
| 229   | 4           | app.use is overloded method or not jystify that.  |             | 2     |  |         |         |         |
| 230   | 4           | give example of cookies. create cookies and delete cookies.   |             | 3     |  |         |         |         |
| 231   | 4           | how to send HTML and JSON data as a Response using Express js.  |             | 2     |  |         |         |         |
| 232   | ŧ           | Write an express is script to load an HTML file having username and email and submit button. On clicking submit button. It should jump on "/std" page using "GET" method. If username is "student" and email id is "studen@gmail.com", then jump on next middleware to print "hello student", if username and email fields are not matched, then stay on same middleware to print "warning msg" in red color. Note: no need to write HTML file. |             | 4     | LJU-2024                                   |         |         |         |
| 233   | ŧ           | Write a script to define an array of 2 JSON objects named emp having members id, name, year. Create a RESTful API to fetch and retrieve details of specific object by providing "id" on URL. Write all necessary files.Note: Upon passing id on the browser url it should display the content having that id. (i.e. on localhost:4000/api/101)  |             | 4     | LJU-2024                                   |         |         |         |

|-----------|----------|---|-------------|-------|----------------------|--------|---|---------|---------|
| 280       | 5        | Write an express js script to configure the multer middleware. Perform following tasks.  1) Create a pug file named "file.pug". This file contains heading(h3) "Upload your CV" in red color. And, a form with input type file(to browse and select file) and submit(to upload the file).  2) Create a js file named "file.js" and link this js and pug file to browse pug file on "home" page.  3) After uploading a file display message on "/upload" page "(file original name) has been uploaded".  4) Save uploaded files to specific directory named "upload". And in this folder file must be stored in format of "lju-file.pdf" where "lju" is the field name.  |             | 5     |                      |        |   |         |         |
| 281       | 5        | Write express js script to upload file with size limit of 1 MB to a specific directory named "Data" on the server.  |             | 5     |                      |        |   |         |         |
| 282       | 5        | Write an express js script to configure the multer middleware. Perform following tasks.  1) Create a html form file named "form.html" in public folder. This file contain centrally oriented heading(h3) "Upload your File" in red color with background-color aqua. Along with choose file option(to browse and select file) and submit button(to upload the file). (Must use external css having name "effect.css" in public folder)  2) Create a js file to show result after uploading any type of file, message should be displayed on "/upload" page "(file original name) has been uploaded".(Css effect must include while running js code)  3) Save uploaded files to specific directory named "File". And in this folder file must be stored in format of "data-file.pdf" where "data" is the field name. |             | 5     |                      |        |   |         |         |
| 283       | 5        | Write Express/S script to load following table using pug file on localhost.           Sr.no         Subject         Faculty Name           1         FSD-2         ABC           2         Python-2         DEF           3         COA         XYZ   |             | 3     | LJU-2023             |        |   |         |         |
| 284       | 5        | Write express JS script to pass data like message, name and id from express application to pug template in h1, h2 and h3 tags respectively and display data in browser.   |             | 3     | LJU-2024             |        |   |         |         |
| 285 5     |          | Write a script to define an array of 2 JSON objects named emp having members id, name, year. Create a RESTful API to fetch and retrieve details of specific object by providing "id" on URL. Write all necessary files.Note: Upon passing id on the browser url it should display the content having that id. (i.e. on localhost:4000/api/101)  |             | 4     | LJU-2024             |        |   |         |         |

| 357   | 6                        | Create react app to perform tasks as asked.  First create files as asked below in routing folder  1. Home_js - for the home page content  2. Shop_js - for the shop page content  3. Contact_js - for the contact page content  4. Nopage_js - for the page other than mentioned links   |             | 4     |               |         |         |         |         |  |
|   |                          | Create Main, is file which contains Links for Home, Shop and Product page. Also, add functionality of page routing. Finally call Main, is in App, is. Create React app to pass student name, roll number, t1 marks and t2 marks of   |             |       |               |         |         |         |         |  |
| 358   | 6                        | Create react app and use routing functionality of react to perform the tasks as  |             | 5     |               |         |         |         |         |  |
| 359   | 6                        | asked. Create one file named Main.js which contains links for home and about page and routing functionality. In Home.js file add one image and heading(h1) "LJ University" In About.js file add branch list (CSE,IT,CE).   |             | 5     |               |         |         |         |         |  |
| 360   | 6                        | Write a ReactJS code in which we have apply filter to skip digits which are less than "10" from the array and display all remaining digits of the array [3.5,11.4,17.8,21,2,26,13.8].  |             | 4     |               |         |         |         |         |  |
| 361   | 6                        | Create React app to pass color(red), background color(yellow), font size(25px) and font style(italic) as properties to component and apply css to "Lj Students" text written in p tag. use Props  Write react is script to perform the tasks as asked below.   |             | 4     |               |         |         |         |         |  |
| 362   | 6                        | Add an array of objects which contains name and age of people.  Apply filter to find people with age less than 40. And display name of all people using map function.  Write react is script to perform the tasks as asked below.  |             | 4     | LJU-2023      |         |         |         |         |  |
| 363   | 6                        | Add an array of objects which contains name and branch(CSE,IT,CE) of students.  Apply filter to find students who are from CSE branch. And display name of all studens of CSE branch using map function.   |             | 5     |               |         |         |         |         |  |
| 364   | 6                        | Create react app and use routing functionality of react to perform the tasks as asked.  Create one file named Main, is which contains links for React Js, Node Js and Express Js and routing functionality.  Create components for each links and add heading "React JS", "Node JS" and "Express JS" in component files Ex1, js, Ex2, js and EX3, js respectively.   |             | 4     |               |         |         |         |         |  |
| 365   | 6                        | Create react app to pass product image, name and price as properties from one component to another component. Add an array of objects with pic, name and price properties of 2 products. Display Image name and price of the products in browser using map method.   |             | 4     |               |         |         |         |         |  |
| 366   | 6                        | Create react app using function component to pass background color(green), font size(50px) font style(italic),text transform(uppercase) as properties to Example .js component and apply css to "This is an React Application" text written in h1 tag in Example2.js component.  |             | 3     |               |         |         |         |         |  |
| 367   | 6                        | Create react app using function component to perform tasks as asked. First create files as asked below in folder named "component"  1. Login,js - for the login page content  2. Product,js - for the Product page content  3. Contact,js - for the contact page content  4. About,js - for the about page content  Create Home,js file which contains Links for Login,Product,Contact and About page. Also, add functionality of page routing. Finally call Home,js in App,js.  Write code for All necessary files. |             | 4     |               |         |         |         |         |  |
| 368   | 6                        | Write a react.js file to pass an integer value to a component, which is defined as a property in app.js file. Fetch that value in component and print its table on console. Write all necessary files i.e. App.js and Component.js. Perform task by function component.  |             | 5     |               |         |         |         |         |  |
| 369   | 6                        | Write React JS script to display three products. Products having title, product<br>image, price and description. All three products should be horizontally adjacent<br>to each other. Note: using props show all products and use Functional<br>component for complete this script.  |             | 3     |               |         |         |         |         |  |
| 370   | 6                        | Implement a character counter that displays the number of characters entered in a textarea input.  |             | 4     |               |         |         |         |         |  |

|    | L.J. Institute of Engineering & Technology, Ahmedabad   |            |   |             |         |               |         |         |         |         |  |  |
|----|---|------------|---|-------------|---------|---------------|---------|---------|---------|---------|--|--|
|    | FSD-2 Practice Book_2025  Note: The Practice Book is for reference only, LJU Test paper may not be compulsory set from this |            |   |             |         |               |         |         |         |         |  |  |
| G- |   | nit_number | time form   |             |         |               |         | option2 |         |         |  |  |
|    | 71  | 6          | write react js script to perform the tasks as asked below using functional component:  1) Add an array of objects which contains name and age of people.  2) Apply filter to find people with age less than 40. And display name of all people using map function.  | answer_text | marks 3 | previous_year | option1 | opuon2  | option3 | option4 |  |  |
| 3  | 772   | 6          | Create a React app to perform tasks as asked using functional component:  1)Create a react Router that includes three routes: Home, Product, and Contact and implement navigation between these routes. 2)Create a route that displays a Home page, Product details page and Contact details page. 3)  When a user clicks on Home page it should navigate to home page and display "Welcome to LJU" in bold in h1 heading. When a user clicks on a Product page, it should navigate to the product detail page and display three products information with price and description using props. And when user clicks on Contact page it should navigate to contact details page and display contact information with blue color font. |             | 4       | LJU-2023      |         |         |         |         |  |  |
| 3  | 73  | 6          | Write a program to create function based ReactJS app having an array of 6 people having mentioned age [70,83,38,65,49,94] and display list of people whose age is greater than 60 using filter method. Also display total count of people whose age is greater than 60 on the same page.  |             | 4       |               |         |         |         |         |  |  |
| 3  | 74  | 6          | Create a React function component named File1 that receives two props, productName and price. The component should display the product name and price. Additionally, add a button labeled "Add to cart" to the component. When the button is clicked onClick event triggered and an alert should be displayed with the message "Your Product is Added to cart!".  |             | 5       |               |         |         |         |         |  |  |
| 3  | 75  | 6          | Write react js script to perform the task as below using function component:  *Create array of objects which have id, name & city of person.  *Display id & name of persons having city name "Ahmedabad" by using map function.  No need to write App.js file.  |             | 3       |               |         |         |         |         |  |  |
| 3  | 76  | 6          | Create react app and use routing functionality of react to perform the tasks as asked. Create one file named navbar.js which contains links for Home, Profile and Dashboard page. In Home file add one image and heading(h1) "LJ University" In profile file displays a heading (h1) "Profile" and a list of details (e.g., Name, Email, Address).in Dashboard file display details of projects (i.e project name, backend,frontend,database)   |             | 4       | LJU-2024      |         |         |         |         |  |  |
| 3  | 17  | 6          | Create a React functional component named UserCard that receives two props: username and email. The component should display the username and email. Additionally, add a button "Send Message" to the component. When the button is clicked, an onClick event should be triggered and an alert should be displayed with the message "Message sent to [username]!".  |             | 4       | LJU-2024      |         |         |         |         |  |  |

# L.J. Institute of Engineering & Technology, Ahmedabad FSD-2 Practice Book 2025

Also, add validation for the email and password fields. Display submited values.  |                  | 4              | LJU-2023                |                                |           |         |         |
| 434   | 7           | Create a react app using function component to display image of flower using AXIOS to make API request. Use API Url (https://flower.ceo/api/image/random). Key name in API which store image is "sample".   |                  | 3              |                         |                                |           |         |         |
| 435   | 7           | Create a Student Data Entry Form using React. Fields are Student Name (input Field), Gender (Radio Button values are Boy, Girl), Subjects (Dropdown values are English, Gujarati), Comments (textarea). When the user Click on the Submit button , it will display an alert and use useState hook.  |                  | 4              |                         |                                |           |         |         |
| 436   | 7           | Build a survey form with radio buttons, and dropdowns. display selected results on the alert box on user responses using React JS Hooks.( App.js file not required).  Survey Form  Select your favorite programming language(_Select Language_V)  Select your experience level:  Beginner OAdvanced  Submit   |                  | 5              |                         |                                |           |         |         |
| 437   | 7           | Create a React app with two components using functional component: Parent and Child. Use useContext to pass two colors from the Parent component to the Child component. The Child component should display the received color as its background(red) and other color(green) on its font to display "Welcome to LJU".   |                  | 4              | LJU-2023                |                                |           |         |         |
| 438   | 7           | Create a React app with three components: parent component P.js and two child components C1.js, C2.js.  Use useContext hook to pass two colors from the Parent component P.js to the Child component C2.js. (Yellow color as font color and Blue color as background color)  In Child component C1.js import child component C2.js.  In C2.js display "Full stack Development" text in h1 heading with above mentioned background color and font color using context. |                  | 5              |                         |                                |           |         |         |
| 439   | 7           | Create a ReactJS program using function component having two input fields for num1 and num2 and two buttons for addition and subtraction of the two numbers. Display the respective outputs on same page using useState hook. Also display alert box as an effect on every time the addition button is clicked using useEffect hook.  |                  | 5              |                         |                                |           |         |         |

| 442   | 8 Git checkout command used for?   | to switch between branches  | 0.5   | to create new documents   | to switch between branches   | Both (A) and (B)   | to delete the repository   |
| 443   | Which command defines the author email to be used for all commits by the current user.   | git configglobal user.email   | 0.5   | git emailamend  | git configglobal user.email  | git clean -f   | git logauthor=""   |
| 444   | 8 What is the full form of GIT?  | Global information Tracker  | 0.5   | Global International Track.                                       | Global information Traffic.  | Global information Tracker                                       | None of the above  |
| 445   | 8 Which Command is used to show limited number of commits?   | git log -n  | 0.5   | git log -online   | git log -n   | git config -n  | git log status   |
| 446   | 8 What is the command to get the current status of the Git repository?   | git status  | 0.5   | status  | git status   | git getStatus  | git configstatus   |
| 447   | 8 What is the command to initialize Git on the current repository?   | git init  | 0.5   | start git   | git start  | git init   | initialize git   |
| 448   | 8 Git automatically adds new files to the repository and starts tracking them.   | FALSE   | 0.5   | TRUE  | FALSE  | Can not say  | None of these  |
| 449   | 8 How do you supply a commit message to a commit?  | Git commit -m "I'm coding!"   | 0.5   | Git add "My first commit"   | Git comit "My first commit"  | Git commit -m "I'm coding!"                                      | Git message "My first commit"  |
| 450   | 8 What is the command to view the history of commits for the repository?   | git log   | 0.5   | git log   | git commits  | git history  | gitfull-log  |
| 451   | 8 In Git, a branch is:   | A separate version of the main repository.  | 0.5   | A secret part of Git config.                                      | A separate version of the main repository.                                       | A small wooden stick you can use to type commands.               | Nothing, it is a nonsense word.  |
| 452   | 8 Which two configuration properties does the tool expect to be configured after installing Git and prior to issuing the first commit?   | username and email address  | 0.5   | username and password   | username and IP address  | email address and password                                       | username and email address   |
| 453   | 8 Where are files stored before they are committed to the local repository?  | staging area/index  | 0.5   | git   | saved files  | git documents  | staging area/index   |
| 454   | 8 Git Pull is a combination of:  | fetch and merge   | 0.5   | fetch and merge   | add and commit   | branch and checkout  | None of the above  |
| 455   | 8 What is version control?   | a system that shows, tracks, and controls changes to a set of files over time   | 0.5   | a type of architecture used to manage large databases             | a system that shows, tracks, and controls<br>changes to a set of files over time | a type of software that links a project with a GitHub repository | a programmatic design pattern used to<br>manage code between multiple engineering<br>teams |
| 456   | 8 Git can be used for which project?   | var fs=require("fs");<br>fs.writeFile("example.txt","", (err)=>   | 0.5   | Java enterprise project   | .Net project   | File version management  | All of the above   |
| 457   | Thecommand is a convenient way to set configuration options for defining the behavior of the repository, user information and preferences, git installation-based configurations, and many such things | var os=require("os");<br>console.log(os.hostname());<br>console.log(os.gos.arch());<br>console.log(os.platform());<br>console.log(os.tmpdir()); | 0.5   | git head  | git conflict   | git status   | git config   |
| 458   | 8 A repository is a file structure where git stores all the project-based files.   | TRUE  | 0.5   | TRUE  | FALSE  | Can not say  | None of these  |
| 459   | 8 What is the command to merge the current branch with the branch "new-email"?   | git merge new-email   | 1     | git add new-email   | git commit -merge new-email  | git merge new-email  | None of the above  |
| 460   | 8 What is the command to add all files and changes of the current folder to the staging environment of the Git repository?   | git addall  | 1     | git add   | git addall   | git addfiles   | None of the above  |
| 461   | 8 What is the command to commit the staged changes for the Git repository?   | git commit  | 1     | git com   | git save   | git snapshot   | git commit   |
| 462   | 8 What is the main command to push the current repository to the remote origin?  | git push origin   | 1     | git push origin   | git merge remote   | git remote push  | git remote commit  |
| 463   | 8 What is the command to get all the change history of the remote repository "origin"?   | git fetch origin  | 1     | git origin help   | git get log origin   | git fetch origin   | git status remote origin   |
| 464   | 8 Which of the following advantage of using GIT?   | All of the above  | 1     | Collaboration friendly  | Data redundancy and replication  | Version history and rollback capabilities                        | All of the above   |
| 465   | 8 Which command creates a copy of an existing git repository.  | git clone   | 1     | git copy  | git clone  | git replace  | git move   |
| 466   | 8 What is the correct command to add FSD-2 repository for uploading files using gitbash from given options?  | git remote add origin "https://github.com/ABCD/FSD-2"   | 1     | git push origin master  | git global add<br>"https://github.com/ABCD/FSD-2"                                | git remote add origin "https://github.com/ABCD/FSD-2"            | git commit -m "Saved"  |

| FSD-2 Practice Book 2025 |
|--------------------------|
|                          |

|       | FSD-2 Practice Book _2025  Note: The Practice Book is for reference only, LJU Test paper may not be compulsory set from this |   |   |       |               |  |   |  |  |  |  |
|-------|--|---|---|-------|---------------|--|---|--|--|--|--|
| Sr.No | unit_number  | question_text   | answer_text   | marks | previous_year | option1  | option2   | option3  | option4  |  |  |
| 491   | 10   | Identify correct command to list name and age of all students excluding _id field.  | db.student.find({{}},{name:1,age:1,_id:0})  | 1     |               | db.student.find({name:1,age:1})                    | db.student.find({name:1,age:1,_id:0})                     | db.student.find({},{name:1,age:1,_id:0})                           | db.student.find({},{name:1,age:1,_id:1})                           |  |  |
| 492   | 10   | 1st and 2nd argument in find() command generally refers & respectively.   | Condition & Projection  | 1     |               | Projection & Condition                             | Condition & Projection                                    | Condition & Selection  | Condition & Join   |  |  |
| 493   | 10   | Identify a correct query returning documents having a field surname occurring 6-10 letters only.  | db.student.find({surname:{\$regex:/^[A-Za-z]{6,10}\$/}})  | 1     |               | db.student.find({surname:{\$regex:/[A-z]{6,10}/}}) | db.student.find({surname:{\$regex:/^[A-Za-z]{6,10}\$/}})  | db.student.find({surname:{\$regex:/ $\d{6,10}$ }})                 | db.student.find({surname:{\$regex:/[A-Za-z]{6,10}/}})              |  |  |
| 494   | 10   | Identify correct syntax to specify model() method   | obj.model("collection_name",Schema_object )   | 0.5   |               | obj.model(Schema object,collection_name)           | obj.model("collection_name",Schema_obje<br>ct)            | obj.model(collection_name)   | obj.model(Schema object)   |  |  |
| 495   | 10   | Identify correct query to increment age of all documents by 10.   | db.test.updateMany({},{\$inc:{age:10}})   | 1     |               | db.test.updateMany({},{\$set:{age:age+10}}})       | db.test.updateMany({},{\$inc:{age:10}})                   | db.test.updateMany({\$inc:{age:10}})                               | All of the above   |  |  |
| 496   | 10   | property is used to remove leading and trailing spaces before/after a field of type string.   | trim  | 0.5   |               | remove_space                                       | validate  | trim   | rm_space   |  |  |
| 497   | 10   | Identify correct query to count no. of documents excluding age=2 and 21.  | db.student.find({age : {\sin:[2,21]}}).count()  | 1     |               | db.student.find({age:{\$nin:[2,21]}}).count ()     | db.student.find({\$and:[{age:{\$ne:2}},{age:{\$ne:21}}]}) | db.student.find({\$or:[{age:{\$ne:2}}},{age: {\$ne:21}}]}).count() | db.student.find({\$and:[{age:{\$eq:2}},{age :{\$eq:21}}]}).count() |  |  |
| 498   | 10   | function is used to enable find() command on secondary server.  | setReadPref()   | 0.5   |               | setReadEnable()                                    | setReadOn()   | setReadTrue()  | setReadPref()  |  |  |
| 499   | 10   | command is used to start a replica set.   | rs.initiate()   | 0.5   |               | rs.begin()   | rs.initiate()   | rs.start()   | rs.continue()  |  |  |
| 500   | 10   | Consider a collection student having documents like this:  { _id:123433,name: "SSS",age:22},         [_id:123434,name: "YYY",age:2},         {_id:123435,name: "PPP",age:22},     }  Let say <b>simple</b> indexing is applied on a student collection on age field and we fire following query. <b>db.student.find({age:22}).explain("executionStats")</b> Identify values of stage, docExamined and nReturned properties of JSON. | stage:IXSCAN, docExamined:2,<br>nReturned:2   | 1     |               |  | stage:IXSCAN, docExamined:3,<br>nReturned:2               | stage:COLLSCAN, docExamined:1,<br>nReturned:1                      | stage:COLLSCAN, docExamined:1, nReturned:2                         |  |  |
| 501   | 10   | Consider a collection student having documents like this:  [  | stage:IXSCAN, docExamined:2,<br>nReturned:2   | 1     |               | stage:IXSCAN, docExamined:2,<br>nReturned:2        | stage:IXSCAN, docExamined:3,<br>nReturned:2               | stage:COLLSCAN, docExamined:1,<br>nReturned:1                      | stage:COLLSCAN, docExamined:1, nReturned:2                         |  |  |
| 502   | 10   | Consider a collection student having documents like this:  [  | var fs=require("fs"); fs.writeFile("example.txt","", (err)=> {console.log(err); });   | 1     |               |  | stage:COLLSCAN, docExamined:1,<br>nReturned:1             | stage:IXSCAN, docExamined:1,<br>nReturned:1                        | stage:IXSCAN, docExamined:3, nReturned:1                           |  |  |
| 503   | 10   | By default indexing is always applied on field.   | var os=require("os");<br>console.log(os.hostname());<br>console.log(os.arch());<br>console.log(os.platform());<br>console.log(os.tmpdir()); | 1     |               | 1st field of table                                 | Last field of table                                       | _id field maintained by default                                    | All of the above   |  |  |
| 504   | 10   | If we apply indexing, then searching is done through data structure.  | B-tree  | 0.5   |               | Binary search tree                                 | Array   | Queue  | B-tree   |  |  |
| 505   | 10   | property is used to restrict values while defining schema of a collection.  | enum  | 0.5   |               | in   | valid   | enum   | list   |  |  |
| 506   | 10   | command is used to delete a document by _id field and show it after deletion.   | findByIdAndDelete()   | 0.5   |               | findAndDelete()                                    | findByIdAndDelete()                                       | delete()   | findByIdAndDrop()  |  |  |

|       | FSD-2 Practice Book _2025  Note: The Practice Book is for reference only, LJU Test paper may not be compulsory set from this |   |  |       |  |   |  |   |  |  |
|-------|--|---|--|-------|--|---|--|---|--|--|
| Sr.No | nit_number   | question_text   | answer_text  | marks | previous_year option1  | option2   | option3  | option4   |  |  |
| 507   | 10   | Identify correct command to update name field of all documents of a "test" collection.  | db.test.updateMany({},<br>{\$set:{name:"QQQ"}})                        | 1     | db.test.updateAll({name:{\$set:"QQQ"}})                                | db.test.updateMany({name:{\$set:"QQQ"}}})             | db.test.updateMany({\$set:{name:"QQQ"}}})                          | db.test.updateMany({},<br>{\$set:{name:"QQQ"}})   |  |  |
| 508   | 10   | Identify correct command equivalent to following SQL command:<br>delete from student  | db.student.deleteMany({})  | 0.5   | db.sudent.deleteOne({})  | db.student.deleteMany()                               | db.student.deleteMany({})  | db.student.deleteAll()  |  |  |
| 509   | 10   | Consider a collection "emp" having documents like this:  [ _id:123433,name: "DDD",age:32}, _id:123434,name: "BBB",age:20}, _id:123435,name: "AAA",age:10}, ] Identify result of following query in cmd: db.emp.find((),(name:1_id:0)).skip(1) | [{name:"BBB"}, {name:"AAA"}]   | 1     | [{name:"DDD"},{name:"BBB"}]  | [{name:"BBB"},{name:"AAA"}]                           | [{name:"BBB"},{name:"DDD"}]  | [{name:"AAA"},{name:"DDD"}]   |  |  |
| 510   | 10   | Consider a collection "emp" having documents like this:  {  | db.emp.find({},<br>{name:1,_id:0}).skip(1)                             | 1     | db.emp.find({},<br>{name:1_id:0}).skip(2).limit(1)                     | db.emp.find({},<br>{name:1_id:0}).limit(2)            | db.emp.find({},<br>{name:1,_id:0}).skip(2)                         | db.emp.find({},<br>{name:1,_id:0}).skip(1)  |  |  |
| 511   | 10   | property inserts a new record, if record to be updated is not found, while firing update query.   | upsert   | 0.5   | modify   | upsert  | update   | set   |  |  |
| 512   | 10   | property returns recently updated record using findByIdAndUpdate() function.  | new:true   | 0.5   | new:false  | new:true  | upsert:true  | \$set:true  |  |  |
| 513   | 10   | operator is used to exclude a list of values from a field during retrieval.   | \$nin  | 0.5   | Sin  | \$restrict  | \$nin  | \$set   |  |  |
| 514   | 10   | Consider following student collection:  {   | Returns only 2 records having names "ppp" & "SSS"                      | 1     | Returns all 3 records  | Error in query as \$in operator takes JSON, not array | Error in query as \$in operator compares by<br>\$eq operator only  | Returns only 2 records having names "ppp" & "SSS"   |  |  |
| 515   | 10   | Given a MongoDB collection named products, you need to find documents where the "price" field is greater than or equal to 50. Which of the following queries should you use?  | db.products.find({ price: { \$gte: 50 } })                             | 1     | db.products.find({ price: { \$gt: 50 } })                              | db.products.find({ price: { \$gte: 50 } })            | db.products.find({ price: { \$1t: 50 } })                          | db.products.find({ price: { \$lte: 50 } })  |  |  |
| 516   | 10   | Consider a collection people having documents like this:  {   | stage:IXSCAN, docExamined:1,nReturned:1                                | 1     | stage:IXSCAN, docExamined:2,<br>nReturned:2                            | stage:IXSCAN, docExamined:3,<br>nReturned:2           | stage:IXSCAN,<br>docExamined:1,nReturned:1                         | stage:COLLSCAN,<br>docExamined:2,nReturned:1  |  |  |
| 517   | 10   | What should be correct code to match a string beginning with "Bharat" only.   | db.state.find({name:{\$regex:/^Bharat/}})                              | 1     | db.state.find({name:{\$regex:/Bharat+/i}})                             | db.state.find({name:{\$regex:/Bharat/i}})             | db.state.find({\$regex:{name:/^Bharat/}})                          |   |  |  |
| 518   | 10   | Consider the following query using \$inc operator. Identify error/output. db.student.updateMany({\$inc:{age:-8}})   | Error, as filter condition must be specified in update() function.     | 1     | Increments age value of all documents and returns modified count.      |   | Error, as filter condition must be specified in update() function. | Same age value of all documents, as condition is not specified, but modified count is not returned. |  |  |
| 519   | 10   | Which is/are the correct query/ies to find eldest person from emp collection?   | db.emp.find().sort({age:-1}).limit(1)                                  | 1     | db.emp.find().sort({age:-1}).limit(1)                                  | db.emp.find().sort({age:1})                           | db.emp.find().sort({age:1}).limit(1)                               | db.emp.findOne().sort({age:1})  |  |  |
| 520   | 10   | Which of the following statements is true about the insertMany method in MongoDB?   | It inserts multiple documents into a collection in a single operation. | 1     | It inserts multiple documents into a collection in a single operation. |   | It upsert a single document into a collection.                     | insertMany is only available in MongoDB<br>Atlas, not in the open-source version.                   |  |  |
| 521   | 10   | Explain find() command with its syntax.   |  | 2     |  |   |  |   |  |  |
| 522   | 10   | Explain update() command with its syntax.   |  | 2     |  |   |  |   |  |  |
| 523   | 10   | Explain limit() & skip() command.   |  | 2     |  |   |  |   |  |  |

|       | L.J. Institute of Engineering & Technology, Ahmedabad FSD-2 Practice Book 2025  |   |                   |               |         |         |         |         |  |  |
|-------|---|---|-------------------|---------------|---------|---------|---------|---------|--|--|
|       | FSD-2 Practice Book_2025  Note: The Practice Book is for reference only, LJU Test paper may not be compulsory set from this |   |                   |               |         |         |         |         |  |  |
|       |   |   |                   |               |         |         |         |         |  |  |
| Sr.No | unit_number   | question_fext   | answer_text marks | previous_year | option1 | option2 | option3 | option4 |  |  |
| 524   | 10  | Write commands to perform following tasks on employee collection having fields name,age & joiningDate: (1) Insert 3-4 records in collection. (2) List all employees who joined before 1st January, 2010. (3) Update the name of employee to "WWW" whose joiningDate is "05-05-2015"   | 3                 |               |         |         |         |         |  |  |
| 525   | 10  | Write commands to perform following tasks on employee collection having fields having name,age & joiningDate: (1) Delete all records having joiningDate before 1st January, 2010. (2) List all employees having age>50 years. (3) List only 1st employee having age>60 years.   | 3                 |               |         |         |         |         |  |  |
| 526   | 10  | Write commands to perform following tasks on employee collection having fields having name,age & joiningDate:  (1) Update the name="Senior citizen" having age>60 years.  (2) Update the name="JKL" having age=20 years. Insert this record, if it is not found.  (3) Retire all employees by deleting senior citizens from collection.                                 | 3                 |               |         |         |         |         |  |  |
| 527   | 10  | Write commands to perform following tasks on employee collection having fields having name,age & joiningDate: (1) Count no. of employees having age>=60 years. (2) List all employees in descending order of names having names "ABC", "PQR", "XYZ". (3) List all employees whose age lies between 25 to 50 years excluding all rest of the fields.                     | 3                 |               |         |         |         |         |  |  |
| 528   | 10  | Map following SQL queries to MongoDB query: (1) alter table people add joiningDate datetime (2) alter table people drop column joiningDate (3) select age,name from people where status="PH" (4) select * from people where status!="PH" (5) select name from people order by age desc  | 5                 |               |         |         |         |         |  |  |
| 529   | 10  | Map following SQL queries to MongoDB query: (1) update employee set name="TTT" where age not in {12,33,44,55} (2) select count(*) from employee where age<>23 (3) update employee set age=age+10  | 3                 |               |         |         |         |         |  |  |
| 530   | 10  | List out comparison operators in MongoDB and explain with example.  | 4                 |               |         |         |         |         |  |  |
| 531   | 10  | Write an expess JS script to insert a document in database using Mongoose.  | 4                 |               |         |         |         |         |  |  |
| 532   | 10  | Explain stepwise process to connect with Mongoose and insert a document.  | 3                 |               |         |         |         |         |  |  |
| 533   | 10  | Explain use of Schema() and model() methods of JS with example.   | 3                 |               |         |         |         |         |  |  |
| 534   | 10  | Create a schema using Schema() constructor having name, surname, age, active and date fields. Name must accept strings and it is a required field. Age must accept numeric values only. Active must accept true/false. Date should have default today's date if it is not entered.  | 4                 |               |         |         |         |         |  |  |
| 535   | 10  | How can we enter multiple documents in a database using express JS?   | 3                 |               |         |         |         |         |  |  |
| 536   | 10  | Consider following student collection:  [ {_id:123433,name: "SSS".age:22}, {_id:123434,name: "YYY".age:2}, {_id:123435,name: "PPP".age:32}, }  Do as directed: (1) Update name="JJJ" and age=40, where age=20 occurs. Insert new document, if record is not found. (2) To retrieve age and name fields of documents having names "YYY" & "SSS". Don't project id field. | 4                 |               |         |         |         |         |  |  |

|-------|---|---|-------------------|-------------------------------|-----------------|--|--|--|--|--|
| Sr.No | unit_number   | question_text   | answer_text marks | previous_year option1 option2 | option3 option4 |  |  |  |  |  |
| 537   | 10  | Write a script to define a schema having fields like name,age,gender,email.  Apply following validations:  (1) name field must remove leading/trailing spaces,minimum and maximum length should be 3 & 10 respectively  (2) age must accept a value from 1<=age<=100 only.  (3) Perform Email ID validation on Email field.  (4) gender must accept values in small letters only and allowed values are "male" & "female" only. | 4                 |                               |                 |  |  |  |  |  |
| 538   |   | Consider following student collection:  [   | 4                 |                               |                 |  |  |  |  |  |
| 539   | 10  | Explain types of indexing with example.   | 4                 |                               |                 |  |  |  |  |  |
| 540   | 10  | Write a node.js script to insert 4 documents simultaneously in a collection.  Assume that schema is already created having name(string), surname(string), age(Number), active(Boolean) fields.  | 5                 |                               |                 |  |  |  |  |  |
| 541   | 10  | Consider a collection student having documents like this:  [  | 4                 |                               |                 |  |  |  |  |  |
| 542   | 10  | How COLLSCAN and IXSCAN differs in terms of indexing? How is it determined?   | 3                 |                               |                 |  |  |  |  |  |
| 543   | 10  | Write a command to initiate 2 replicas in a replica set "rs1".  | 5                 |                               |                 |  |  |  |  |  |
| 544   | 10  | What is the primary difference between updateOne() and findByIdAndUpdate() commands?  | 3                 |                               |                 |  |  |  |  |  |
| 545   | 10  | What is the primary difference between deleteOne() and findByIdAndDelete() commands?  | 3                 |                               |                 |  |  |  |  |  |
| 546   | 10  | How \$regex operator is used to filter a specific values of a field. Explain with example.  | 3                 |                               |                 |  |  |  |  |  |

|       | L.J. Institute of Engineering & Technology, Ahmedabad FSD-2 Practice Book, 2025                   |   |                   |               |         |         |         |         |  |  |

|       | Note: The Practice Book is for reference only, LJU Test paper may not be compulsory set from this |   |                   |               |         |         |         |         |  |  |
| Sr.No | unit_numbe  | r question_text   | answer_text marks | previous_year | option1 | option2 | option3 | option4 |  |  |
| 547   | 10  | Write a node js script to define a schema having fields like name, surname, email, password, city.  Apply following validations: (1) name field must required. (2) surname must accept values in small letters. (3) Perform Email ID validation on Email field. (4) password must have minimum and maximum length should be 8 & 12 respectively (5) city allowed values are "baroda", "surat" and "ahmedabad" only                                  | 5                 |               |         |         |         |         |  |  |
| 548   | 10  | Create one login form having username , password and submit button . By clicking submit button username and password should be store inside database. Use mongoose and express module. write all necessary files  | 5                 |               |         |         |         |         |  |  |
| 549   | 10  | Write a program using react and node/express to demonstrate a full stack connectivity. Take one textfield, submit button on react and insert a corresponding record in database via node/express script. Write required files.  | 5                 |               |         |         |         |         |  |  |
| 550   | 10  | Consider a collection student having documents like this:  [  | 5                 |               |         |         |         |         |  |  |
| 552   | 10  | Create a form containing username and submit button using .html file.After clicking on submit button,insert value of username in the database.(Note: .html and .js file required)   | 4                 | LJU 2023      |         |         |         |         |  |  |
| 553   | 10  | Write a node js script to define a schema having fields like name, age and gender Apply following validations: (1) name field must be required field with minimum and maximum length of 4 & 12 respectively (2) age must accept a value from 1<=age<=35 only. (3) gender must accept values in capital letters only and allowed values are "male" & "female" only.  Write a script to have a "NAME" text field and a submit button in Form.js file. | 3                 |               |         |         |         |         |  |  |
| 554   | 10  | After clicking on submit button, insert that value of text field in database named 'mydb'. (React MongoDB Connectivity)   | 3                 |               |         |         |         |         |  |  |

|       | L.J. Institute of Engineering & Technology, Ahmedabad  |  |             |       |                       |         |         |         |  |  |  |
|-------|--|--|-------------|-------|-----------------------|---------|---------|---------|--|--|--|
|       | FSD-2 Practice Book_2025  Note: The Practice Book is for reference only, LJU Test paper may not be compulsory set from this  |  |             |       |                       |         |         |         |  |  |  |
|       | TOTAL THE FIGURE BOTH EACH CONTINUE FOR THE PROPERTY OF THE PR |  |             |       |                       |         |         |         |  |  |  |
| Sr.No | unit_number  | question_text  | answer_text | marks | previous_year option1 | option2 | option3 | option4 |  |  |  |
|       |  | Consider following citizens collection:  |             |       |                       |         |         |         |  |  |  |
| 555   | 10   | [_id:123433, name: "DD", surname: "abc", age:61}, [_id:123434, name: "LL", surname: "def", age:38}, [_id:123435, name: "KK", surname: "pqr", age:29} [_id:123436, name: "ZZ", surname: "xyz", age:62} ] Insert above data in "userdata" collection under database named "maindata" and write a query to perform below task in node.js. (1)Insert a category field with value "SeniorCitizen" having age greater than   |             | 5     |                       |         |         |         |  |  |  |
|       |  | 60. (2)Display total number of documents having age between 30 and 60 only.  |             |       |                       |         |         |         |  |  |  |
|       |  | Consider collection named "movie" having documents like this: [ ("title": "Inception", "director": "Christopher Nolan", "release_year": 2010}, [ 'title": "The Matrix", "director": "The Wachowskis", "release_year": 1999},   |             |       |                       |         |         |         |  |  |  |
| 556   | 10   | {"title": "The Avengers", "director": "Joss Whedon", "release_year": 2012,} } Do as directed:  (1) Create a subset-based index that includes only movies released after the year 2000. Specify the field or condition used in the subset. Additionally, write a command to get a scan stage = "IXSCAN" for movie released after the year 2000 and give the values of nReturned and docExamined.  |             | 5     |                       |         |         |         |  |  |  |
|       |  | (2) Generate indexing on director and release_year. Additionally, write a command to get movie released on or before the year 2010 and give the values of nReturned, docExamined and its scan stage.   |             |       |                       |         |         |         |  |  |  |
| 557   | 10   | Write a node.js script to define a schema having fields like Firstname, age, email, citychoice and insert one random document having collection name "applicant" under "applicant" adatabase.  Apply following validations: (1) Firstname field must remove leading/trailing spaces, minimum and maximum length should be 3& 10 respectively. (2) aplicant's age must be between 18 to 30. (3) Perform Email ID validation on email field. (4). citychoice must accept values in capital letters only and allowed values are "AHMEDABAD", "PUNE" & "BANGALORE" only. |             | 5     |                       |         |         |         |  |  |  |
| 558   | 10   | Consider following faculty collection: [{ _id:123456788, name: "ABC", subject: "FSD-2", age:27},   |             | 2     |                       |         |         |         |  |  |  |
| 559   | 10   | Write a node is script to define a schema having fields like name & age.  Apply following validations:  (1) Name field must remove leading/trailing spaces, must accept values in lowercase, allowed values are "abc", "def", "pqr", "xyz" & maximum length should be 10.  (2) age must accept a value from 1<=age<=100 only.  |             | 3     |                       |         |         |         |  |  |  |
